Refer to A Guide to the Reports: Understanding the Presentation of Data for an explanation of the variety of ways data is presented.

Suggested reference: Quinn B, Irvine J. Northern Saskatchewan Health Indicators, Community Characteristics: Population Profile. Athabasca Health Authority and Saskatchewan Health Authority, Population Health Unit, La Ronge, 2023.

All maps in this report were created by Tracy Creighton, GIS Analyst with the Saskatchewan Health Authority. Copies of this document and related reports can be downloaded from the Population Health Unit website www.pophealthnorthsask.ca

Key Messages

For the purpose of this report, northern Saskatchewan refers to North East networks 1 and 2, and North West network 1 within the Saskatchewan Health Authority (SHA), as well as the Athabasca Health Authority (AHA). The main data source for this report is the Saskatchewan Covered Population file maintained by the Research Unit in the Acute and Emergency Services Branch at the Saskatchewan Ministry of Health.

In 2022, close to 40,000 individuals lived in northern Saskatchewan. Compared to the province, northern Saskatchewan has a much younger population with larger proportions of its population in the age groups less than 40 years of age, while more of Saskatchewan's population is in the middle and older age groups.

In 2022, the northern Saskatchewan networks and AHA had between 35-38% of its population less than 20 years of age and only between 5-9% of its population aged 65 years and over. Comparatively, Saskatchewan had 29% of its population less than 20 years of age and 19% aged 65 years and over.

The northern Saskatchewan networks and AHA continue to have growing populations, increasing between 6 and 13% over the last 10 years. This equated to changes of 163, 1766, 574, 980, and 3483 individuals in AHA, North East 1, North East 2, North West 1, and northern Saskatchewan, respectively. Similarly, Saskatchewan increased by 15% over the same time period, which equated into an increase of 156,825 individuals.

The dependency ratio is the ratio of the combined child population (aged 0 to 19) and elderly population (aged 65 and over) compared to the working age population (aged 20 to 64). This ratio is presented as the number of dependents for every 100 people in the working age population. A higher dependency ratio suggests a population that is more socially and economically stressed, as they have more individuals that are "dependent" on the working population. In 2022, the northern networks had dependency ratio's ranging between 74.3 and 88.0. These were all elevated compared to the provincial rate of 72.6. In northern Saskatchewan the dependency ratio is mainly attributable to the elevated youth population, which makes up between 35 and 38% of the total population. Conversely, the older adult population, which comprises 17% of the provinces total population, provides a larger component of the provinces dependency ratio.

There have been shifts in the population over the last number of years. Compared to 2010, in 2022 there have been decreases in the proportion of the population less than 20 years of age within the northern networks and AHA. Overall in northern Saskatchewan the proportion of the population less than 20 years of age decreased from 42% in 2010 to 37% in 2022. At the same time, the proportion of the population aged 65 and over has increased. Overall in northern Saskatchewan the proportion of the population aged 65 years and over increased from 5% in 2010 to 8% in 2022. These population shifts will have implications in disease rates seen in northern Saskatchewan, as many chronic disease have elevated rates in the older adult populations compared to youth.

Although northern communities share many commonalities, they also vary greatly among one another in terms of population sizes, structures and growth rates.

The community level tables at the end of the report are presented at different geographical levels. The smallest level of geography is the community, which can be rolled up to various levels including the community area.

The community area is a grouping of several communities that are generally in close proximity, often share mailing addresses and have very close ties between them including familial relationships. Community areas can be further grouped into Small Area Geographies (SAGs), which are a larger grouping of communities that, in the north, often share some of their primary care (e.g. physician groups) and hospital services with each other. These SAG's can be combined into larger groups called health networks. Health Networks are the building blocks of the reorganization of healthcare within Saskatchewan and serve to connect teams of health care professionals and community partners to better meet the needs of the people they serve. In addition to health networks, northern Saskatchewan also has the Athabasca Health Authority, which is a unique partnership of federal, provincial, and First Nations health authorities that provide health services to the communities of the far north. Please refer to the report Community Characteristics: Geographic and Political Profile for further descriptions of the geographical, political, administrative and jurisdictional regions within northern Saskatchewan.

Communities can also be defined by their jurisdiction. For the purpose of this report jurisdiction is defined as either First Nations, SHA, or AHA. First Nations communities are communities that would generally be considered living “on reserve” in relation to many, although not all, public health and primary care services they receive. This definition of “jurisdiction” is derived within the PHU and may not match up identically with other definitions such as census geographies. For example, Pelican Narrows IRI and Pelican Narrows northern village are combined into one Pelican Narrows community and is considered “on-reserve” using the PHU definition. All other communities would be considered “off-reserve” and assigned to either SHA or AHA depending on health authority that provides the service. Please see Appendix D for a list of communities by jurisdiction in northern Saskatchewan networks and AHA.

Appendix A – Data Notes

Data Sources

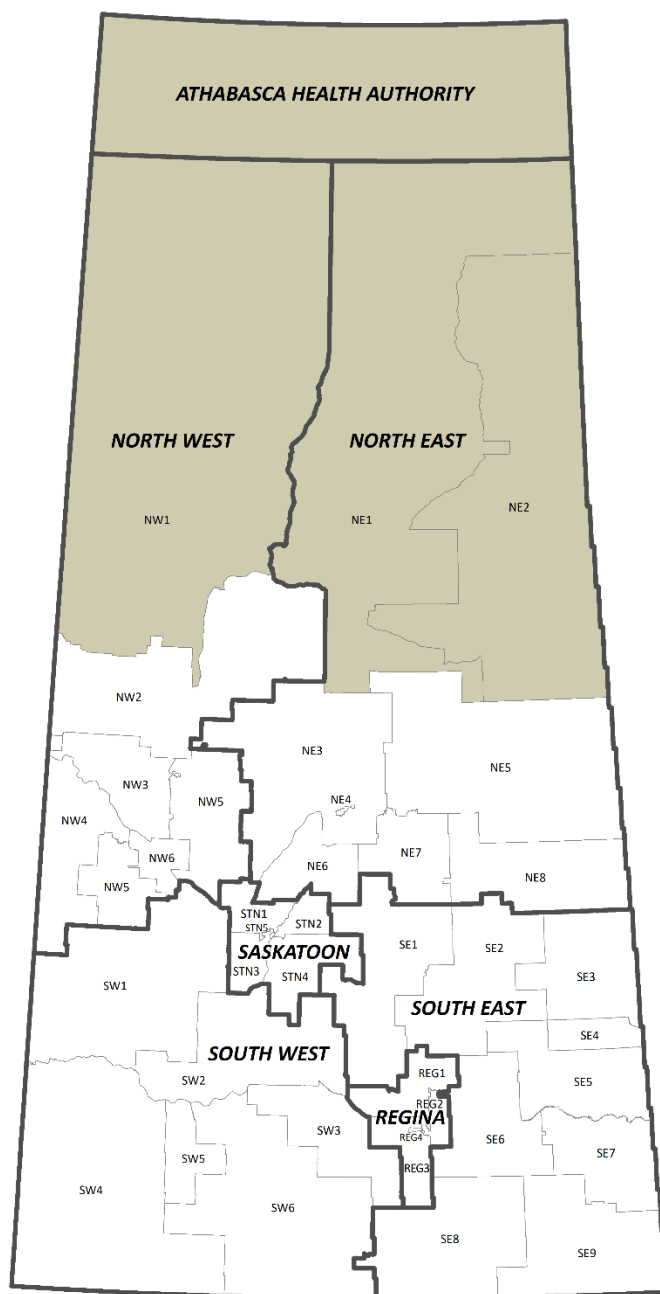

Covered Population 2022 file – The Covered Population is based on eligibility for health insurance benefits in Saskatchewan as of June 30, 2022. All residents of Saskatchewan are included except: (a) members of the Canadian Forces and inmates of federal prisons and (b) people not yet meeting the residency requirement (coverage begins on the first day of the third calendar month following a move to Saskatchewan). The covered population estimates are derived from the person health registry system which collects information on multiple addresses, when available, in an attempt to distinguish between correspondence (i.e. mailing address) and residence addresses. Adjustments were made to the raw PHRS file to account for underestimates in Registered Indian Status populations. Adjustments were also made to ages, band codes, postal codes, rural municipalities, and residence codes to create a more accurate version of the covered population report.

Data Notes

Presentation of Data (e.g. numbers of death, crude rates, age-standardized rates) – For a full description of crude rates, age-adjusted rates, and raw numbers, please refer to “A Guide to the Reports – Understanding the Presentation of Data” report on the Population Health Unit website:

[http://www.populationhealthunit.ca/mrws/filedriver/Health Indicator reports/A Guide to the Reports Understanding the Presentation of Data.pdf](http://www.populationhealthunit.ca/mrws/filedriver/Health%20Indicator%20reports/A%20Guide%20to%20the%20Reports%20Understanding%20the%20Presentation%20of%20Data.pdf).
